

Contents

1	Introduction and a Brief History of UNIX	7
1.1	Welcome to WSU Computer Science	7
1.2	Introduction to Computer History	8
1.3	The Mainframes	8
1.4	The Minicomputer	11
1.5	The Microcomputer	14
1.6	The Birth of UNIX	17
1.7	The UNIX workstation	18
1.8	Early Internet and TCP/IP	19
1.9	LINUX: A UNIX Rebirth	20
1.10	Linux and UNIX in 2003	21
1.11	Summary	22
2	Connecting to the WSU Computer Science System	23
2.1	Networking 101	23
2.2	The Username And Password	24
2.3	UNIX System Rules	25
2.4	Local Logins	26
2.5	SSH and logging in through the Internet	27
2.5.1	Using Secure FTP	27
2.6	Dialing into WSU CS via MODEM	28
2.7	Logging Out	28
3	Basic UNIX Concepts	29
3.1	Hierarchical File Systems, an Analogy	29
3.2	Hierarchical File Systems, UNIX and LINUX	31
3.3	The Home Directory	33
3.4	Common Filesystem Commands and Concepts	34
3.4.1	Getting file lists using the “ls” command	34
3.4.2	Getting file info using the “file” command	34
3.4.3	more “ls” tricks	35
3.4.4	Directory navigation using the “cd” and “pwd” commands	36
3.4.5	Making copies of a file using the “cp” command	38
3.4.6	Removing Unwanted Files using the “rm” command	38

3.4.7	Renaming files using the “mv” command	39
3.4.8	File system organization using the “mkdir” and “rmdir” commands	39
3.4.9	Advanced Filesystem Topic: Relative and Absolute Path Names	40
3.4.10	File Permissions, More “ls” Tips and “chmod”, “umask” .	42
3.4.11	Hidden Files and the “ls -al” command	45
3.4.12	Disk Quotas (Storage Limits)	46
3.5	Processes	47
3.6	The Shell	49
3.6.1	Wildcards	49
3.6.2	Environment Variables and the PATH	50
3.6.3	Piping and Redirection	51
3.6.4	Background and Foreground	52
4	Important Commands	55
4.1	Quick Review of Basic Filesystem Commands	55
4.1.1	Finding files, the “find” command.	56
4.2	Process Commands	56
4.2.1	Who is logged in, the “who” command	56
4.2.2	What jobs are running, the “ps” command	57
4.2.3	Killing jobs, the “kill” command	57
4.3	Administrative Commands	57
4.3.1	Changing passwords, the “yppasswd” command	57
4.4	Printing and Viewing Commands	57
4.4.1	Showing file contents, the “cat” command	57
4.4.2	File contents viewer, the “more” command	57
4.4.3	File contents viewer, the “less” command	58
4.5	The “C” language compiler, “gcc”	60
4.6	Reading online documentation, the “man” and “apropos” com- mands	60
4.7	File Movement and Deletion	62
4.8	Finding programs, the “which” command	62
4.9	Getting printouts, printing, the “lpr”, “a2ps” and “mpage” com- mands, plus KDE	62
4.9.1	Querying and Removing print jobs, “lpq” and “lprm” . .	63
4.10	Reading and Sending Email	64
5	Text Editors	65
5.1	Introduction to Text Editors	65
5.1.1	Text Editors in the Computer Science Department	65
5.1.2	General Hints on Editors and Editing Files	66
5.1.3	Notation for following sections	66
5.2	“pico”, the Beginning CS editor	67
5.3	“vi”, the Standard UNIX Text Editor	70
5.3.1	Common Command Mode Keys	72

5.3.2	Insert/Input mode	74
5.3.3	vi in closing	74
5.4	GNU Emacs, the Programmer's Editor, "emacs"	74
5.4.1	Invoking Emacs	75
5.4.2	Emacs Modes	75
5.4.3	Special Command Keys and Emacs	77
6	Advanced Topics	83
6.1	Linux Lab Computers	83
6.2	Networking and Communications	84
6.2.1	PuTTY, an OpenSSH (Secure Shell) for Microsoft Windows	84
6.2.2	Current list of servers and protocols supported	84
6.2.3	Using FTP and Secure FTP	84
6.2.4	Uploading and Downloading files via Modem and CS Dialup	86
6.3	WSU CS Filesystems	87
6.3.1	WSU CS Home Directory Conventions	87
6.3.2	umask settings	87
6.3.3	Advanced (dangerous) rm	88
6.3.4	Fixing Disk Quota Problems	88
6.4	Removable Media Access	90
6.4.1	Using the floppy drive on LINUX computers	90
6.4.2	Using the ZIP drive on LINUX computers	90
6.4.3	Using the CDROM/CD-RW drive on LINUX computers .	91
6.5	Graphics and Xwindows Applications	91
6.5.1	Xwindows Basics	91
6.5.2	Xwindows tunneling under SSH	92
6.5.3	Viewing Internet Documents	92
6.5.4	Miscellaneous KDE Tips	93
6.5.5	Dealing with Microsoft Windows format documents . . .	94
6.6	Future Versions of this Manual	96
